

International Ship and Port Facility Security (ISPS) Code – port advisory services

The Lloyd's Register Group has developed a practical approach to helping ports and port facilities meet their obligations under the ISPS Code. We can assist you in the development and conduct of:

- port Gap Analyses
- port facility security assessments (PFSAs)
- on-scene security surveys
- port facility security plans (PFSPs).

Interpreting the ISPS Code

The requirements of the ISPS Code are complex and far-reaching. Leading up to July 1, 2004, ports and port facilities must base their compliance on the latest interpretations of the Code. We routinely communicate with the industry's decision makers and are therefore able to provide advice based on the most up-to-date and relevant information.

Because no two ports or port facilities are the same, the Lloyd's Register Group will work with you to develop the most efficient and cost-effective range of advisory services suited to your organisation.

Gap Analysis

Port and port facilities can be very complex. We can provide a Gap Analysis – a detailed report of the requirements necessary to gain compliance with the ISPS Code, describing training required for port facility security officers (PFSOs) and others, how to develop PFSAs (if applicable), and PFSPs for approval by contracting governments. It will provide the port or port facility with all the information needed to produce an invitation to tender. These services will be based on one of the following levels of assistance, depending on your specific needs.

Assistance level 1

Based on Lloyd's Register Group training for your security staff, you carry out the port facility security assessments (PFSAs) and develop the port facility security plan (PFSP) required for each port facility. We will then review and comment on the PFSAs and PFSP prior to submission to the contracting government.

Assistance level 2

The Lloyd's Register Group will advise you on the development of the security policies and procedures required.

We will develop a generic PFSA template containing a provisional list of potential threat scenarios for each type of port facility at the port. Your staff, under our guidance, will be able to complete a PFSA for each remaining facility.

Our security experts will advise and teach the PFSO how to undertake the port facility on-scene security survey using the Lloyd's Register *Port Facility Practical Pack*.

Based on generic PFSAs, and using expert security knowledge, we will develop PFSP templates. Your staff can then use these to develop the other PFSPs for the remaining port facilities within the port.

Assistance level 3

We will carry out the PFSA, and on-scene security survey and develop the PFSP for each port facility at the port.

In-house training

Implicit in the Code, though not specifically required, is the need for security management training. The Lloyd's Register Group provides approved training courses for PFSOs, port staff and the company management team. This training is available worldwide at times and locations of your choice.

The benefits

You receive expert security advice delivered at a level that suits your needs.

You receive the assistance you need to develop and implement an effective security management system that meets the requirements of the ISPS Code.

How to contact us

To find out how you can really benefit from our ISPS Code port advisory services, please contact one of the specialists shown overleaf.

Lloyd's Register EMEA

71 Fenchurch Street
London EC3M 4BS, UK
